           This sequence represents the coding sequence for the human melatonin receptor protein. This sequence is used in an expression vector designated pakko-hhotP7. The expression vector is used to produce the chinese hamster ovary (CHO) cells of the invention. The CHO cells express the human melatonin receptor protein, and can be used to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         234 heArgAssFheValThrMetFheValValEheValLcuFheAlsTleCyc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               receptor. The CHO cells can also be used to produce the receptor. The mulatonin receptor addist out be used as an agent for preventing or treating jet lag, sleeplessness, seasonal melancholia, Alzheimer's disease, dementia caused by cerebral thrombosis, various diseases arcompanying agentu, high blood pressure, cancer, and glaucoma. The molatonin receptor can also be used as an ovulation regulator. The mulatonin receptor antagonist can be used as an agent for preventing or recating mulatorshells, neurosis, or mental confusion

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This DNA sequence comprises the gene coding for mouse melatonic lack (Mella) receptor (see W23958). A 466 by fragment of the gene was cloned from genomic DNA by PCR, and was used to probe a BALB/c adult mouse liver EMRIA SPA/T7 genomic library to isolate the Mella receptor gene. A claimed nucleic acid (I) comprises a functional melatonin la receptor gene promoter (II) linked to a reporter gene. Cells containing (I) are used to screen compounds (A) for ability to alter transcription from (II) (claimed). (A) that are activators are useful for treating circadian rhythm disorders in humans (e.g. jet lag, shere-wake disturbances in the blind or regulation of ovarian cyclicity) and for control of the reproductive cycle in seasonally breeding animals, while those that are inhibitors are used to control initiation and timing of puborty in humans. Screening for (A) can now be done in cultures of transformed cells which do not naturally express the receptor (which is naturally localised to a few specific sites in the central nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-09-225-045-12 x V04544

                                                                                                                                                                                                                                                                                                                                                           Transcription polymerase chain reaction amplification of mouse R2-2 mbNA. The curresponding aground that currests of 2 excus divided by a large (over 8 kb) intron. The 3'-untranslated region is 444 bp long, and includes the polyadenylation signal AUUAA. A major transcription start site is located about 100 bp upstream of the initiation coden. Peceptor fragments which interact with cor receptor antaquists. Adonists may be used as receptor-agonists or receptor antaquists. Adonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic animal for use as a model system to screen agonists and antagonists.
                                                                                                                                                     US-09 226-046-12 x T09951

                                                                                                                             transcription polymerase chain reaction amplification of sheep pars tuberalls mRNA, using primers derived from the Xenopus laevis melationin receptor sequence (TMO947), and use of the product as a probe on a sheep pars tuberalls cDNA library and a sheep genomic library, to obtain the complete sequence as a hybrid fusion with a 5'-genomic sequence and a 3'-cDNA sequence. Receptor fragments which interact with melations, or specific antibodies, may be used as receptor-antagonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control evaluation, or in alternation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             melatonin receptor-agonist, melatonin receptor-antagonist;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The gene has been cloned by polymerase chain reaction amplification of human genemic (NAA, using primers derived from the Xenopus laevis melatorin receptor sequence (T09947), and use of the product as a probe on a human genome library in plage EMBL 3 under high stringency. The 5'-portion of the gene has been obtained by reprobling the FNA library at low stringency, and the complete sequence is given in T09950. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists or receptor-antagonists Agonists may be used as receptor-agonists or receptor-antagonists such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Percent Similarity.

The nucleotide sequence was isolated from CDNA derived from xenopus skin PNA and amplified using the primers T7945-76. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEI-laa has been shown to inhibit adenylyl cyclase, but both proteins can modulate intracellular cGMP, esp. inhibiting its accumulation induced by an inhibitor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences T79063-66 represent novel allelic genes of the Xenopus laevis melatonin receptor MEL-1A. The sequences encode, proteins which are 65 amino acids shorter than those described in the prior art. Also the last 2 C-terminal amino acids encoded by these sequences are different from the previously known proteins. This sequence is a short form of the novel receptor MEL-1Aa also known as Mel 1-c(alpha). As compared to the long form (179065), the difference occurs in the 3 unitranslated region (both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            109 enserVallleGlySerllePheAsnIleThrGlyIleAlaIleAsnArg

                                                                                                                               amino acids shorter than those described in the prior art. Also the last 2 C-terminal amino arids encoded by those separates are different from the previously known proteins. This sequence is a long form of the novel receptor MEL-IAG also known as Mel 1-c(alpha). As compared to the short form (779064), the difference occurs in the 3' untranslated region (both sequences encode the same protein), which is thought to affort the half-life of the mRNA. The nucleotide sequence was isolated from cDNA derived from xenepus skin RNA and amplified using the primers 77967-76. The nucleotide sequence electedes a protein which is a 7 transmembrane receptor involved in celiular signalling. MEL-IAG has been shown to inhibit adenylyi cyclase, but both proteins can modulate intracellular phosphodiesterase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequences 179063-66 represent novel allelic genes of the Xenopus laevis melatonin receptor MRL-IA. The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. Also the la
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding functional melatonin receptor of Xenopus for screening for potential (aut)agonists useful for e.g. treating cardiovascular disease and cancer

Agonists may be used in therapy of circadian rhythm discreders such as jet-lag or day-night cycle disorders, to control ovallation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             consensus sequence for initiation of translation. The Xenopus sequence has been used for isolation of homologous sheep, mouse and human melatonin receptor sequences. Receptor fragments which

The receptor is a membrane protein, coupled to quanine nucleotide binding proteins (G-proteins). The cDNA has been cloned from Xenopus dermal melanophores, and expressed in Escherichia coli Flanking ENA sequences of the 1st 2 Met codons both display a Korak
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ENA encoding high affinity melatonin receptor one – used to identify receptor agonists or antagonists e g for regulating circadian rhythm disorders or reproductive cycles

The nucleotide sequence was isolated from cUNA derived from Xencpis skin PNA and amplified using the primers T79667-76. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEL-1Ab has been shown to modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amino acids shorter than those described in the prior art. This sequence is a short form of the novel receptor MEL-lab shown as Mel 1-c(beta). As compared to the short form (T79066), the difference occurs in the 3' untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The MEL-lab sequences also differ from known MEL-lab teachers 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ADS.

The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. This sequence is a long form of the novel receptor MEL-IAb also known as Mel 1-c(beta). As compared to the short form (T79066), the difference occurs in the 3' untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The MEL-IAb sequences also differ from known MEL-IA receptor sequences by 6 amino acids. The nucleotide sequence was isolated from cDNA derived from xenopus skin RNA and amplified using the primers 179967-76. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEL-IAb has been shown to modulate intracellular cOMP, esp. inhibiting its accumulation induced by an inhibitor of phosphodioscorase, but unlike MEL-IAb (T70063) cannor inhibit adenylyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Allele, Xenopus laevis, melatonin, receptor, untranslated region, POR, mRNA, half-life; skin; amplification; primer, polymerase chain reaction; transmembrane domain, collular signalling, inhibition; ademylyl gyplase; modulation; intracellular; cyclic GMP; inhibitor; phosphodiesterase; ss

303 G. 251 T: 0 other:

The sequence encodes human high-affinity melatonin-lb receptor. CC which is a membrane protein, coupled to quanine nucleotide binding CC proteins (G-proteins), and has been closed by PCF amplification of thuman genomic DNA, using primers based on the 3rd and 6th CC human genomic DNA, using primers based on the 3rd and 6th CC recepting of a human brain cDNA library. The genomic sequence has comening of a human brain cDNA library. The genomic sequence has come interested about 19 km in the 1st cytoplasmic loop region.

CC Intron PCR with primers T09953-54 and 43 human-rodent somatic conclusion.

CC charmsone 11221 22 Filmers T09951 [classifier the human MNTRIB denote to charmsone 11421 22 Filmers T09951 [classifier protein framents which consists and 11221 22 Filmers T09951 [classifier and protein seed as contract with melatonin, or specific and protein say be used in the tast with melatonin, or specific and protein say be used in the paper of citradian rhythm disorders such as jet-lag or day high control countries and hardonists may be used in the paper of control control countries and animals.

CC The receptor generated he in seasonally broading animals Animans.

CC The receptor generated also be expressed in a transactic animal for use as a model system to several agonists and antagonists.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bind especially to rat galanin receptor proteins. Products from the present invention are used in assays of calanin/aalanin receptor binding and the development of drugs acting on galanin binding, such as memory function improvers, appetite improvers and function regulators for the womb, kidney, prostate, testis or skeletal muscle, y49129 to y45134 and massive to massive 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Physiologically active peptide; receptor binding galanin receptor; GALR1; GALR3; chymotrypsin; ligand; preprogalanin; galanin; drug development; memory function, appetite improver; womb; kidney; function regulator; prostate; testis; skeletal muscle; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         336 erPro 337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               319 ePheValAspSerSerAsnAspValAlaAspArqValLysTrpLysProS
